data scientists, labor unions, and community leaders to design a model that respects legal work-hour limits while still meeting the city's 24/7 policing commitment. At its core, the algorithm processes three inputs: officer availability, historical incident density, and mandated rest periods. It then runs a weighted optimization that: Prioritizes high-incident zones during peak hours, ensuring more boots are on the ground where calls are most frequent. Balances workload by rotating officers through a mix of daytime, evening, and night shifts, reducing the likelihood of extended night duty. Enforces rest compliance by automatically inserting 12-hour recovery blocks after any shift exceeding eight hours of active duty. In this video, we'll be explaining the DuPont 12hr
